Skills

Bio AI

Biological KGs · plant disease AI · scientific output review

Biology Data

Genes · proteins · regulation · variants · diseases · ontologies

Backend & APIs

Python · FastAPI · REST · Node.js · Docker

Product Tools

React · Flutter · Java · JavaScript · Git · CI/CD

Profile

Computer Scientist with 3+ years of experience at iCog Labs working on computational biology AI systems, biological knowledge graphs, neural graph mining, LLM-based interpretation, and plant disease classification. Experienced turning complex biological data into reviewable knowledge graph outputs, visual analysis artifacts, technical reports, and AI-supported interpretation workflows. Strong fit for roles involving computational biology, biological AI systems, scientific data quality, and evaluation of AI-generated biology outputs.

Experience

Computational Biology / Knowledge Graph Engineer - BioCypher KG

iCog Labs / Rejuve.Bio | 2023 to Present

- Built and maintained biological KG workflows integrating 34 human and 11 Drosophila sources across genes, proteins, regulatory elements, variants, diseases, ontologies, and annotations.
- Worked with BioCypher, Neo4j, NetworkX, MeTTa, Prolog, and multi-format exports to make biological datasets traceable, structured, and reviewable.
- Supported source validation, schema alignment, provenance manifests, release detection, and changed-file loading so generated outputs could be checked for completeness and consistency.

Biological Graph Analysis & AI Systems - NeuroGraph / Graph Mining

iCog Labs | 2025 to 2026

- Led an AI platform for graph ingestion, neural motif mining, LLM-powered interpretation, visualization, annotation workflows, and downloadable analysis results.
- Reviewed graph-mining outputs for biological plausibility, relationship structure, recurring motifs, interpretation quality, and whether visual/report artifacts matched the underlying data.
- Helped turn raw CSV/JSON datasets into interpretable graph artifacts with query history, analytics summaries, visual exploration, and human-review workflows.

Computer Vision Research - Coffee Plant Disease Classification

Addis Ababa University | 2023 to 2024

- Built an end-to-end AI workflow for coffee leaf disease classification, including dataset collection, labeling, model training, evaluation, API integration, and frontend delivery.
- Worked with agricultural image data and model outputs where correctness, class labeling, visual quality, and practical presentation mattered for plant health use cases.

Computational Bio & AI Systems

Biological Data, Graph Analysis & Scientific Review

- Built and reviewed workflows that transform biological datasets into knowledge graphs, graph-mining outputs, visual artifacts, technical summaries, and LLM-supported interpretations.
- Comfortable checking scientific outputs for data grounding, internal consistency, biological plausibility, clear presentation, and alignment between source data, analysis, and generated explanations.

Projects

BioCypher Biological Knowledge Graph

Rejuve.Bio / iCog Labs

Integrated human and Drosophila sources into KG workflows covering genes, proteins, diseases, variants, ontologies, annotations, and regulation.

Neural Subgraph Matcher Miner

Rejuve.Bio / iCog Labs

Worked with neural subgraph matching, semantic label embeddings, motif discovery, visual outputs, and biological network analysis.

Coffee Plant Disease Classification

Final Year Project | 2023 to 2024

Built a plant health AI system for coffee leaves, connecting image classification, model evaluation, API delivery, and frontend presentation.

Other Engineering Projects

Personal Projects | 2022 to 2023

Built a Flutter QR-based campus PC authentication app and a Java Swing lounge management system for ordering and inventory tracking.

Biological Research & Analysis

Human Biological KG Mining

Analysis Report | BioCypher KG, 2026

Analyzed a 150,619-node, ~20M-edge biological KG and characterized 11,311 discovered motif instances.

Transcription Factor Network Patterns

Manuscript | iCog Labs / Rejuve.Bio, 2026

Analyzed TFLink regulatory relationships and reported 503 recurrent hierarchy-pattern instances across 374 genes.

Protein Interaction Motif Analysis

Manuscript | iCog Labs / Rejuve.Bio, 2026

Analyzed STRING PPI mining results with 14,877 instances across 18 motif types and multiple biological modules.

Education

B.Sc. in Computer Science

Addis Ababa University | Graduated: July 2024

Certifications

Coursera Specializations

- Supervised Machine Learning: Regression and Classification
- Neural Networks and Deep Learning
- Mathematics for Machine Learning: Linear Algebra
- Object-Oriented Design
